

ALTEN USE CASE

Commercial Intelligence & Prospecting Agent

Centrale Nantes Etudes | AI for Business Hackathon | April 18, 2026

Summary Sheet

Field	Details
Owner	Elias
Context	ALTEN Use Case — AI for Business Hackathon
Technology	AWS, Lovable, Python, LLM, Google Drive, Salesforce and others
Estimated Duration	7 hours of development
Status	Currently being designed

Context & Objective

ALTEN aims to develop an internal tool to automate its commercial prospecting process. Currently, prospecting is carried out manually: searching for prospects, analysing the market, building a database, and finding contacts. This process is time-consuming and difficult to scale.

The objective is to create a no-code AI agent capable of:

- Automatically finding prospects in a given sector based on predefined and/or user-defined criteria
- Studying the potential market for ALTEN by retrieving data on prospective clients
- Saving all data in real time to Google Drive and/or Salesforce
- Generating a bi-monthly analysis of news relating to ALTEN prospects and/or clients based on current events
- Being operated via a simple web interface, without any technical skills required

Inputs & Outputs

User Inputs

- Industry sector (e.g. consulting, manufacturing, tech...)
- Geographic area (city or region)
- Number of desired prospects
- Free-form search conditions (use of a specific technology, other criteria)
- Prospect search metrics (optional): revenue, headcount (FTEs), revenue/FTE ratio, variation in these two metrics, growth potential, known use of intellectual services

Generated Outputs

- Google Sheets file listing all prospects with their status and identified metrics
- News report on ALTEN prospects and clients

- Nice to have: Market analysis based on a weighted combination of search metrics

Hackathon Deliverables

- Functional N8N workflow, demonstrable live
- Web interface accessible from a browser
- Google Sheets database generated in real time during the demo
- Examples of generated reports
- Workflow documentation (N8N screenshots + explanations)

Value Added

- Tool directly reusable by ALTEN for its own prospecting campaigns
- Significant time savings: what currently takes 2–3 hours manually is completed in a matter of minutes
- Concrete illustration of AI applied to business, understandable by ALTEN's commercial teams
